LLM Fine-Tuning Expert

PyTorch Expert

Multi-Agent / LangGraph Adv.

Multi-GPU Training Adv.

RAG & Vector DBs (FAISS) Adv.

Prompt Engineering (CoT, structured output) Adv.

Quantization / vLLM Adv.

MCTS & LLM-as-Judge Adv.

Claude Code / Codex Adv.

Summary

PhD candidate building LLM systems end-to-end—fine-tuning, agentic orchestration, and RAG. **Agentic AI:** DAG-based LangGraph multi-agent orchestration, MCTS-driven action search, and LLM-as-Judge self-improvement loops feeding preferences back into DPO. **Prompt engineering:** dual-temperature generation/critique, Pydantic-structured output, and chain-of-thought decomposition. Built **CodeQ** (MCTS+DPO debugger, **91% fix rate on DebugBench**) and **BioLite Suite** (biology SLMs). IEEE TPAMI / TCBB / Nature author with **81+ citations** and 2 CRAN R packages.

Technical Stack

LLM/Agents: LangGraph, LangChain, Multi-Agent Orchestration, Claude/OpenAI APIs, RAG, FAISS, MCTS for Agentic Search

ML/DL: PyTorch, LoRA/QLoRA (PEFT), DPO/RLHF/SFT, Hugging Face (Transformers, TRL), Flash Attention 2, bitsandbytes (4-bit NF4), vLLM, scikit-learn, XGBoost, SHAP

Infra: Multi-GPU Training (2×H100, NCCL), MIG GPU Partitioning (A100), Docker, Weights & Biases, LangSmith, FastAPI

Selected Projects

Parallel Multi-Agent Code Generation **2026**
Python, LangGraph, Claude API, Docker, Streamlit

- DAG of concurrent LangGraph coder workers with Docker-sandboxed pytest (**79/79 pass rate**) and iterative revision.
- Streamlit UI with dynamic Haiku/Sonnet/Opus selection; LangSmith observability.

Self-Evolving Code Generator **2026**
Python, LangGraph, Claude API, LLM-as-Judge

- Automated LLM-as-Judge loop scores code on correctness/efficiency/style and refines prompts without human input.
- Validated the self-improvement paradigm later scaled in CodeQ via DPO.

Multi-Agent Code Generation (V1) **2026**
Python, Claude API, Pydantic

- Baseline coder/tester multi-agent loop with shared Pydantic state and configurable revision iterations.
- Foundation later extended into the Parallel (concurrent LangGraph) and Self-Evolving (LLM-as-Judge) variants.

CodeQ: Self-Improving Debugging Agent **2026**
PyTorch, DPO, MCTS, LoRA, TRL, 2×H100

- MCTS + DPO self-improvement on Qwen2.5-Coder-7B; **84% fix rate on DebugBench** (base 43.9%, MCTS-only 81.3%) after two DPO rounds.
- Built Fp32LogitsDPOTrainer to fix bf16 NaN overflow; dual-temperature prompt strategy (gen 0.8, critique 0.2).

BioLite Suite: Domain-Specialized SLMs **2026**
QLoRA, SFT, DPO, Llama 3.2, MIG A100

- Fine-tuned Llama 3.2 (1B/3B) with QLoRA on MIG-partitioned A100 (∼4.8 GB) for biology narrative generation.
- Released 2 Hugging Face models, 1 dataset, and full training pipeline.

Classical ML (scikit-learn, XGBoost, CNN, RNN, GAN) Adv.

Python / R / C++ / SQL Expert

Education

Expected 2026

Ph.D., Computer Science

New Mexico State University

Advisor: Dr. Satyajayant Misra

Spring 2026

M.S., CS (AI/ML)

New Mexico State University

GPA: 4.00

2015 – 2017

M.Tech, CSE (Gold Medal)

Tripura University

GPA: 9.83/10

2011 – 2015

B.Tech, CSE

NIT Agartala

GPA: 7.62/10

Awards

· **M.Tech Gold Medal** (T.U.)
· **Biopattern Award**, (NMSU)
· **Ph.D. Tuition Scholarship**

Other Experience

Graduate Teaching Assistant
CS, NMSU
TA for Data Structures, Algorithms, AI, Machine Programming, C++, Java etc. courses.

NutriBot RAG System **2025 - 2026**
FAISS, BM25, RRF, FastAPI, Claude API

- Hybrid FAISS + BM25 + Reciprocal Rank Fusion retrieval over nutrition literature.
- Cut per-query LLM cost ∼**50%** via caching, threshold gating, and token budgeting.

Federated Diabetes Predictor **2026**
Python, Flower, PyTorch, FedAvg

- Federated learning on the Diabetes Health Indicators dataset, training across distributed clients without centralizing health data.
- Evaluated convergence and accuracy trade-offs vs. centralized baselines.

Research Experience

Graduate Research Assistant **2020 – Present**
Dept. of Computer Science, NMSU

- Designed FOCC algorithm for optimal circular clustering ($O(KN \log^2 N)$, IEEE/ACM TCBB); co-developed circular silhouette method (IEEE TPAMI); developing *Pohori* for alternative splicing detection.

Research Collaborator, Hansen Lab **2023 – 2025**
Dept. of Biology, NMSU

- Computational analysis of radiation-induced alternative splicing in *Aedes aegypti* via rMATS, identifying 197 genes across Hippo and Notch pathways (*Scientific Reports* 2025).

Research Collaborator, Castillo Lab **2021 – 2023**
Dept. of Biology, NMSU

- Built proteomics / phospho-proteomics pipelines (peptide quantification, PTM site mapping, differential abundance) and snail (*Physella acuta*) RNA-seq pipelines (alignment, Trinity de novo assembly, differential immune-response analysis).

Software

CRAN: OptCirClust · CircularSilhouette.
